GUL WATERSPORTS | 2020

WETSUIT TECHNOLOGY

1

Gul's exclusive Cornwall based R&D facility is staffed by a full-time design team dedicated to quality assurance and unmatched attention to detail. Building and refining through multiple rounds of prototypes using the same process that Denis Cross himself pioneered over 50 years ago. Extensive testing and working closely with the best British athletes has driven Gul's wetsuit technology to the absolute limits.

Tested in the frigid waters across the globe, Gul's LAVA neoprene is born.
The pre-stretched is Gul's most flexible, softest material we have ever created.

Gul - leading wetsuit innovation for over 50 years by the COLD WATER SPECIALISTS

1. LAVA FLUID STRETCH TECHNOLOGY

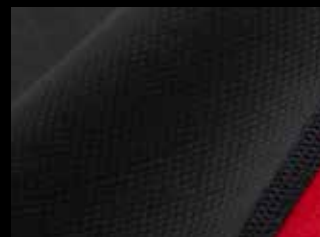

WETSUIT NEOPRENE

2.

3.

4.

5.

6.

7.

2. FX:LITE

15% lighter than X-flex neoprene. Made with more air cells to increase warmth and decrease weight. It's hydrophobic properties absorb less water, providing superior warmth and durability.

3. RS-FLEX-MK 2

The latest evolution of RS Flex neoprene! Now with over 150% + stretch the Ripstop is 10% lighter, the tighter weaved textile provides less water absorption, better durability, and maximum stretch.

4. RS-FLEX

150% textured Stretch Neoprene, 20% lighter and 30% less water absorption than X-Flex.

5. X-FLEX

150% stretch neoprene is used in our high performance wetsuits. The latest X-FLEX neoprene is 10% lighter, absorbs less water and has a softer, more comfortable feel.

6. POWERTEX

Four way stretch high specification knee panels designed to resist the most harsh elements while providing maximum flexion and extension of the knee.

7. D-FLEX

50% stretch neoprene. Flexible, warm, durable neoprene allowing you to perform for longer.

WETSUIT CONSTRUCTION

1.

2.

3.

4.

5.

1. LAVA TAPE

Lava Flow Tape is as fluid as lava, that stretches with your body and provides extra waterproofing to the seam and adds additional reinforcement.

2. BLINDSTITCH

Panels are double glued and then butted together followed by stitching that does not penetrate all the way through the neoprene. Inside the wetsuit, heat welded tape goes over the seams in high stress areas, this further strengthens the seams.

3. FLATLOCK

Neoprene is lapped together and then stitched, this creates a flat, flexible and comfortable seam. Flatlock stitching can be identified by a band of interlocked thread on both sides of the wetsuit, sometimes utilising a coloured thread for visual effect.

4. LIQUIDSEAM

Panels are glued and blindstitched. The seam is then sealed using a coloured liquid silicon based urethane which reinforces the seam giving each suit a 100% water seal.

5. NEOTAPE

Thermo Seam Tape: 4-way stretch, lightweight, durable glideskin interior seam tape creates an even better seal that keeps warmth in and water out. The tape is either gold or black glideskin.

WETSUIT LINING

1.

2.

3.

4.

1. BOLTDRY-X

Gul's exclusive fast drying neoprene. The ultra quick-dry core wicks water away from the skin creating a cushion of air between the body and suit, giving immense insulation and warmth.

2. MAGMA

Magma Air-Insulation thermal inner lining is super soft, 20% lighter and has 30% less water absorption than Thermal X-Flex resulting in the warmest material available in the Gul line up.

3. THERMOSPAN

Engineered so that your core body temperature locks in the heat. By wicking away your body moisture the lightweight thermal insulation traps warm air all around you. Keeping your core body warm helping blood to pump around your body creating your own central heating system.

4. X-FLEX THERMAL

Combines the performance of X-Flex neoprene with lightweight thermal insulating lining Thermospan. The benefits of combining these technologies create a 10% lighter wetsuit with increase thermal properties.

WETSUIT FEATURES

1.

2.

3.

4.

5.

6.

7.

8.

9.

1. REVO FIT

Revo Fit has been created using innovative pattern cutting technology producing our finest fitting wetsuits. This 3D fit results in a higher level of comfort and has been improved through intensive team rider testing.

2. MESH

Optimum core wind chill protection by absorbing solar heat and reducing evaporative cooling.

3. TITANIUM 2

Used in the main body panels of most of our wetsuits. T2 Neoprene acts in a similar way to a survival blanket, and reflects body heat back to the body.

4. G-TAPE

Inner waterproof X-Flex taping fuses seams together for additional reinforcement.

5. AERO-COMB

Aero-Comb minimises weight while maximising its internal area, this space allows trapped air to heat up and insulate your core.

6. GLIDE SKIN

Glide skin seals allows you to slip in and out of your wetsuit with ease and comfort. The flexible rubberised coating means you won't get painful rubbing around your neck, allowing you to surf all day without irritation.

7. BEND

Flexible knee hinge embossed system.

8. S-SEAL

Two thin strips of liquid neoprene sit on the inner wrist forming the perfect seal between skin and suit minimising flush.

9. LOOPIN

Streamline lower calf key pocket with drain hole and key loop.

WETSUIT ENTRY SYSTEM

1.

2.

3.

4.

1. QUADRATE

This horizontal bib front entry system contains a micro blackout low profile waterproof chest zip. The glide-skin seals and the concealed bungee cord keeps water out. Eradicating the back zip gives extra stretch to the back of the suit. A snap-lock ensures that the zip pull stays in place.

2. ABS

This diagonal zip entry system, has a single sided opening reducing flush. The glide-skin seal and bungee cord / barrel lock keeps more water out. A snap lock ensures that the zip pull stays in place.

3. UBS

Internal barrier shield prevents water penetration whilst increasing insulation and maintaining the wetsuits flexibility.

4. S-LOCK

This easy entry back zip system contains a blackout waterproof zip. The zip is concealed by a unique twin flap smooth-skin seal creating a flush barrier without the bulk of the UBS system.

VIPER

- BLINDSTITCHED SEAMS
- LAVA: PRE-STRETCHED NEOPRENE SLEEVE
- FX:LITE: LIGHT, DURABLE, WARM
- BOLT DRY X: THERMAL QUICK DRY

VIPER

GUL'S VIPER - THE ULTIMATE WETSUIT WITH NO COMPROMISE.
PACKED FULL OF THE LATEST GUL INNOVATIONS SUCH AS THE LAVA: PRE-STRETCHED ∞ INFINITY FLUID STRETCH NEOPRENE FOR MAXIMUM FREEDOM, FX:LITE: SILKY SMOOTH, HYDROPHOBIC (I.E. DOESN'T HOLD H2O) MATERIAL FOR FULL BODY DEFENCE IN THE HARSHTEST OF WINDS AND BOLTDRYX LINING FROM CHEST TO KNEE FOR ULTIMATE WARMTH. LAVA FLOW TAPED CONSTRUCTION FOR A TOUGH WATERPROOF SEAM, RESULTING IN NO NEED FOR A LIQUIDSEAL THAT OFTEN ENDS UP CRACKING FOR MAXIMUM SEAM DURABILITY. THE VIPER A SERIOUS SUIT FROM THE COLD WATER SPECIALISTS, LEADERS IN INNOVATION FOR OVER 50 YEARS.

_CONSTRUCTION

- BLINDSTITCHED: SEAM CONSTRUCTION
- LAVA: PRE-STRETCHED ∞ INFINITY FLUID STRETCH NEOPRENE SLEEVE- THE MOST FLEXIBLE, SOFTEST MATERIAL WE HAVE EVER CREATED
- FX:LITE: SILKY SMOOTH, HYDROPHOBIC (I.E. DOESN'T HOLD H2O) MATERIAL. PROVIDING FULL BODY WIND CHILL PROTECTION IN THE WATER. 15% LIGHTER THAN X-FLEX NEOPRENE
 - BOLT DRY X: THERMAL QUICK DRY CORE
- POWERTEX4: KNEES FOR FLEXIBILITY & DURABILITY
 - ABS: AQUA BARRIER CHEST ENTRY
- FLOATING, ABS FRONT-ZIP WITH CORROSION-PROOF SALMI® ZIPPER

_FEATURES

- REVO FIT: 3D PATTERN TECHNOLOGY
- AERO-COMB: LIGHTWEIGHT CORE INSULATION *
- LAVA FLOW TAPED: A TAPE THAT IS AS FLUID AS LAVA THAT STRETCHES WITH YOUR BODY AND PROVIDES EXTRA WATERPROOFING TO THE SEAM AND ADDITIONAL REINFORCEMENT
 - MESH: BACK TO PREVENT WIND CHILL
- VELOAD STROKE TECHNOLOGY: A UNIQUE DESIGNED EMBOSS & 3D PRINT THAT MAXIMISES STROKE FORCE THROUGHOUT THE ENTIRE STROKE WHILST PADDLING
 - KEY LOOP: LOW PROFILE KEY LOOP
 - PRO NECK: SEAM FREE NECK SEAL

WETSUITS

VIPER

GUL'S VIPER - THE ULTIMATE WETSUIT WITH NO COMPROMISE.
PACKED FULL OF THE LATEST GUL INNOVATIONS SUCH AS THE LAVA: PRE-STRETCHED ∞ INFINITY FLUID STRETCH NEOPRENE FOR MAXIMUM FREEDOM, FX:LITE: SILKY SMOOTH, HYDROPHOBIC (I.E. DOESN'T HOLD H2O) MATERIAL FOR FULL BODY DEFENCE IN THE HARSHTEST OF WINDS AND BOLTDRYX LINING FROM CHEST TO KNEE FOR ULTIMATE WARMTH. LAVA FLOW TAPED CONSTRUCTION FOR A TOUGH WATERPROOF SEAM, RESULTING IN NO NEED FOR A LIQUIDSEAL THAT OFTEN ENDS UP CRACKING FOR MAXIMUM SEAM DURABILITY. THE VIPER A SERIOUS SUIT FROM THE COLD WATER SPECIALIST, LEADERS IN INNOVATION FOR OVER 50 YEARS.

_CONSTRUCTION

- BLINDSTITCHED: SEAM CONSTRUCTION
- LAVA: PRE-STRETCHED ∞ INFINITY FLUID STRETCH NEOPRENE SLEEVE- THE MOST FLEXIBLE, SOFTEST MATERIAL WE HAVE EVER CREATED
- FX:LITE: SILKY SMOOTH, HYDROPHOBIC (I.E. DOESN'T HOLD H2O) MATERIAL. PROVIDING FULL BODY WIND CHILL PROTECTION IN THE WATER. 15% LIGHTER THAN X-FLEX NEOPRENE
 - BOLT DRY X: THERMAL QUICK DRY CORE
 - POWERTEX4: KNEES FOR FLEXIBILITY & DURABILITY
 - ABS: AQUA BARRIER CHEST ENTRY
- FLOATING, ABS FRONT-ZIP WITH CORROSION-PROOF SALMI® ZIPPER

_FEATURES

- REVO FIT: 3D PATTERN TECHNOLOGY
- AERO-COMB: LIGHTWEIGHT CORE INSULATION *
- LAVA FLOW TAPED: A TAPE THAT IS AS FLUID AS LAVA THAT STRETCHES WITH YOUR BODY AND PROVIDES EXTRA WATERPROOFING TO THE SEAM AND ADDITIONAL REINFORCEMENT
 - MESH: BACK TO PREVENT WIND CHILL
- VELOAD STROKE TECHNOLOGY: A UNIQUE DESIGNED EMBOSS & 3D PRINT THAT MAXIMISES STROKE FORCE THROUGHOUT THE ENTIRE STROKE WHILST PADDLING
 - KEY LOOP: LOW PROFILE KEY LOOP
 - PRO NECK: SEAM FREE NECK SEAL

_KNEE PADS

_PRO PADS & BANDS

①

spfx:lite

lightweight flexibility

High performance neoprene made from limestone derivatives. Setting the new benchmark when it comes to lightweight flexibility. FX:LITE neoprene is 15% lighter than X-FLEX neoprene. Made with more air cells to increase warmth and decrease weight. It's hydrophobic properties absorbs less water, providing superior Warmth and durability.

1. FX:LITE NEOPRENE

SAILING NEOPRENE

2.

4.

2. X-FLEX

150% stretch neoprene is used in our high performance wetsuits. The latest X-FLEX neoprene is 10% lighter, absorbs less water and has a softer, more comfortable feel.

3. POWERTEX 4

Four way stretch high specification knee panels designed to resist the most harsh elements while providing maximum flex and extension of the knee.

3.

4. FLEX-TEX

Highly abrasion resistant triple knit neoprene. Provides high levels of durability combined with excellent stretch characteristics.

SAILING CONSTRUCTION

1.

1. BLINDSTITCH

Panels are double glued and then butted together followed by stitching that does not penetrate all the way through the neoprene. Inside the wetsuit, heat welded tape goes over the seams in high stress areas, this further strengthens the seams.

2.

2. FLATLOCK

Neoprene is lapped together and then stitched, this creates a flat, flexible and comfortable seam. Flatlock stitching can be identified by a band of interlocked thread on both sides of the wetsuit, sometimes utilising a coloured thread for visual effect.

SAILING LINING

1.

1. BOLTDRY-X

Gul's exclusive fastest drying neoprene yet. The ultra quick-dry core wicks water away from the skin creating a cushion of air between the body and suit, giving ultimate insulation and warmth. Now with even more stretch.

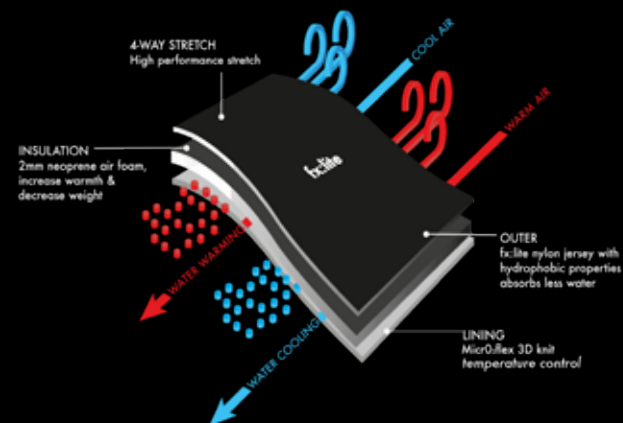

2.

2. MICRO²FLEX

MicrO²flex designed for all weather versatility. In cooler climates the 3D knit of the MicrO²flex traps the air, forming a thermal blanket between you and the elements, whilst wicking away sweat.

MICRO²FLEX
TEMPERATURE CONTROL LINING

MicrO²flex designed for all weather versatility. In cool climates the 3D knit of the MicrO²flex traps the air, forming a thermal blanket between you and the elements. In conditions when the temperatures are warmer, the thinner construction promotes the water cooling effect, whilst wicking moisture away from your body.

SAILING FEATURES

5.

6.

7.

8.

9.

10.

11.

1. REVO FIT

Revo Fit has been created using innovative pattern cutting technology producing our finest fitting wetsuits. This 3D fit results in a higher level of comfort and has been improved through intensive team rider testing.

2. MESH

Optimum core wind chill protection by absorbing solar heat and reducing evaporative cooling.

3. TITANIUM 2

Used in the main body panels of most of our wetsuits. T2 Neoprene acts in a similar way to a survival blanket, and reflects body heat back to the body.

4. G-TAPE

Inner waterproof X-Flex taping fuses seams together for additional reinforcement.

5. GLIDE SKIN

Glide skin seals allows you to slip in and out of your wetsuit with ease and comfort. The flexible rubberised coating means you won't get painful rubbing around your neck, allowing you to surf all day without irritation.

6. BEND

Flexible knee hinge embossed system.

7. AIRPRENE

Airprene for breathability and maximum freedom of movement.

8. FLOW

Flow drainage system for additional drainage in problem areas, armpit, hood and forearm.

9. P-EAZY II

P-Eazy is a discretely hidden relief aid, a new development in our Code Zero sailing wetsuits. Designed for ease and comfort. Alleviating the need for a zip, improving stretch over and around the groin and torso area with a velcro fixture.

10. S-SHIELD

New to our Code Zero sailing suit range. S-Shield is a lightweight yet durable addition to our existing PowerTex knees. Designed to offer optimum protection in a high impact area.

11. ELITE PADS

The CodeZero Elite suit uses biokinetic inserts with the most advanced technology for superior impact protection and minimal interference. When you are working hard on the water, your vulnerable to the continuous impact. The force of the impact generates energy that the unprotected muscles have to absorb, leading to tissue damage and overall muscular deterioration.

Gul Elite uses an ultra-light, ultra-thin layer of high density act® foam which provides superior contusion protection by absorbing 90% of the shock from impact. Act® is Gul's high performance open-cell foam that absorbs most of the energy not only from the impact, it also minimizes the energy bounce back that a sailor experiences when sailing, allowing you to perform beyond what is necessary.

PERFORM BEYOND WHAT IS NECESSARY...

HIGH LEVEL IMPACT PROTECTION

- DURABLE FOR STRENGTH
- FLEXIBLE FOR MOVEMENT
- REDUCES INJURY AND DAMAGE

SAILING SUITS

PERFORMANCE MEETS SUSTAINABILITY

The Recore Series; made from YulexPure® with recycled laminates and Aqua-A™ solvent free lamination, making one of the most environmentally-friendly wetsuits available.

YulexPure® is a natural rubber sourced from Forest Stewardship Council® (FSC®) certified plantations, providing a high-performance, low carbon alternative to traditional neoprene.

Aqua-A™ lamination glue is water based and completely solvent free with no harmful chemicals. Aqua-A™ replaces traditional solvents based glues.

Recore™ X-Flex water repellent jersey made from PET recycled polyester replaces traditional laminates. Each wetsuit uses approx. 45 Recycled bottles.

GUL WINDWARD POWER PADS & COMPRESSION BANDS

The Windward Hike Pad Pro, five-layer construction gives a more flexible fit. The Pro pad includes: **1.**Webbing and Batten Protection: to protect the upper leg from any rubbing or damage to the skin that hiking may cause. **2.**Five Layer Internal Pressure Battens: these spread the load minimising pressure points, helping you hike comfortably for longer. **3.**Super Soft Plush Lining: which prevents chafing to the skin that may be caused by hiking providing extra comfort. **4.**Duratex Power Grip: A rubberised 3D print helps the pro pad to grip in position by locking against the super plush lining. Combining to create a pad that will allow you to hike harder for longer!

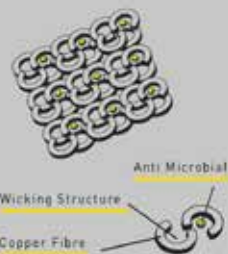

PADS FIT ALL GUL WETSUITS

COPPER COMPRESSION

The Gul compression bands have been designed and made with 15% copper-infused super soft fabric providing additional health benefits. These pads work by applying pressure to the veins in the leg, helping the natural pump mechanism in your muscles, greatly improving circulation.

FEATURES AND BENEFITS

- Helps relieve muscle stiffness and soreness
- Stimulates blood flow
- Anti-bacterial and Anti-odour

HOW TO FIT GUL PRO PADS WITH COMPRESSION BANDS

1. INSERT PADS IN TO BANDS

Insert the Windward Power Pad in to the back of the compression band.

2. FIX PADS TO BANDS

Attach the pad to band to achieve optimum fit using the snap provided.

3. PLACE PADS ON THIGH

Place pads and band comfortably on the thigh in position, a few centimeters above the knee.

4. DO UP YOUR WETSUIT

Start pulling up your wetsuit, and move the pad to the most comfortable position on your thigh. The pro pads combined with compression band will work under any Gul suit.

DRYSUIT TECHNOLOGY

For extreme wet, cold and windy conditions, GCX4 EVO mechanical stretch fabric will keep you warm, dry and safe. Gaining the optimum experience, allowing you to achieve personal goals, because the challenge never ends. The highly advanced GCX4 four-layer 2/2 mechanical stretch fabric specifically engineered to fit the demanding use over time, whilst offering additional flexibility. Waterproof- 20 000 mm Breathability - 10 000 g/m/24h. All seams fully taped for long lasting extreme water proofness.

• Waterproof • Windproof • Breathability • Flexibility

1. GCX 4 EVO Fabric

DRYSUIT FABRICS

2. **GCX3**
For extreme wet, cold and windy conditions, GCX3 fabric will keep you warm, dry and safe. Gaining the optimum experience, allowing you to achieve personal goals, because the challenge never ends. The advanced GCX3 three-layer fabric is specifically engineered for long-term performance. It offers waterproofness and breathability even during strenuous use. All seams fully taped for long lasting extreme waterproofness. Waterproof - 20 000 mm Breathability - 10 000 gr/m²/24h All seams fully taped for long lasting extreme waterproofness.

• Waterproof • Windproof • Breathable

DRYSUIT NEOPRENE

1. **POWERTEX**
Four way stretch high specification knee panels designed to resist the most harsh elements while providing maximum flexion and extension of the knee.

DRYSUIT CONSTRUCTION

1. **BLINDSTITCH**
Panels are double glued and then butted together followed by stitching that does not penetrate all the way through the neoprene. Inside the wetsuit, heat welded tape goes over the seams in high stress areas, this further strengthens the seams.

2. **LIQUIDSEAM**
Panels are glued and blindstitched. The seam is then sealed using a liquid silicone based urethane which reinforces the seam giving each suit a 100% water seal.

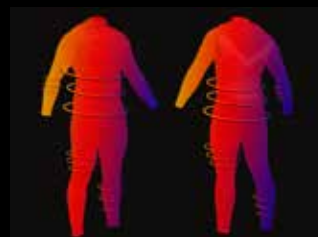

3. **TAPED SEAMS**
We add fully taped seams to our fully waterproof garments to keep you dry in the harshest of conditions. Taping all seams on a garment regardless of where they are situated ensures heavy duty waterproofing.

4. **G-TAPE**
Inner waterproof X-Flex taping fuses seams together for additional reinforcement.

DRYSUIT FEATURES

1. **REVO FIT**
Revo Fit has been created using innovative pattern cutting technology producing our finest fitting drysuits. This 3D fit results in a higher level of comfort and has been improved through intensive team rider testing.

2. **GLIDE SKIN**
Glide skin seals allows you to slip in and out of your drysuit with ease and comfort. The flexible rubberised coating means you won't get painful rubbing around your neck, allowing you to sail all day without irritation.

3. **ARTICULATED KNEES**
The Articulated knee has been constructed from highly abrasion resistant, heavy duty Codura® material. The pre bent knee shape provides an ergonomic fit for endless mobility and durability during the most challenging tasks.

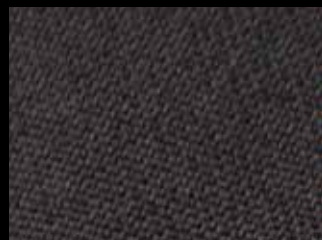

DRYSUIT LINING

1.

1. X-FLEX THERMO

X-Flex Thermal combines the performance of X-Flex neoprene with lightweight thermal insulating lining Thermospan. The benefits of combining these technologies create a 10% lighter wetsuit with increased thermal properties.

2.

2. CORDURA®

Cordura® fabric provides durability and exceptional strength-to-weight ratio. This hard wearing fabric is resistant to tears, scuffs and abrasions. Designed for living, built to last.

DRYSUIT ENTRY-SYSTEM

1.

1. HORSESHOE

The U-Zip Horseshoe Eazzy on entry system has been designed for easy donning. Guls unique wraparound neck zip placement utilises modern zip technology using a tough YKK Aquaseal zipper to keep water out.

2.

2. ECLIP ZIP

The Eclip Zip entry system has the longest possible lifespan from a zip by offering reduced stress whilst donning and doffing. This zip positioning also eliminates any discomfort when bending forward as it frees up the lower torso. Featuring the YKK Aqua seal dry zip.

SPRAYTOP TECHNOLOGY

DRYSUIT CONSTRUCTION

1.

1. GCX 4 EVO

For extreme wet, cold and windy conditions, GCX4 EVO mechanical stretch fabric will keep you warm, dry and safe. Gaining the optimum experience, allowing you to achieve personal goals, because the challenge never ends. The highly advanced GCX4 four-layer 2/2 mechanical stretch fabric specifically engineered to fit the demanding use over time, whilst offering additional flexibility. Waterproof: 20,000mm. Breathability - 10,000 g/m²/24h. All seams fully taped for long lasting extreme water proofness.

• Waterproof • Windproof • Breathability • Flexibility

2.

2. GCX HT

For general recreation and watersports GCX HT fabric helps to keep you warm and reduce wind-chill to improve your overall experience. Thermal Reflective technology helps to manage your body's core temperature. The Silver Foiled membrane fabric reflects and retains the warmth your body generates while dissipating moisture and excess heat, maintaining a high level of breathability whilst keeping you dry and comfortable, even during strenuous movement. Perfect for those icy winter days on the water.

• Lightweight • Windproof • Water Repellent • Breathable

3.

3. GCX PU COATED

For winter conditions GCX PU COATED fleece fabric keeps you snug and warm performing when wet or dry. Gaining the most from your watersports experience, allowing you to perform at your best for longer. The thermal advanced GCX PU COATED polyurethane fabric. Engineered to keep you warmer for longer by combining a PU outer membrane with a inner fleece layer. Waterproof - 3000mm, Breathability - 3000 gr/m²/24h. All seams fully taped for long lasting waterproofness.

• Waterproof • Breathable • Thermal

4.

4. GCX 2 LITE

For light to moderate conditions GCX2 LITE fabric will keep you warm, dry and comfortable. Gaining the most from your watersports experience, allowing you to perform at your best for longer.

5.

5. GCX 2

For everyday to difficult conditions GCX2 fabric will keep you warm, dry and comfortable. Gaining the most from your watersports experience, allowing you to perform at your best for longer. The hardwearing, breathable advanced GCX2 two-layer fabric, is specifically engineered to prevent water penetration, allowing perspiration moisture to evaporate. Waterproof - 5000mm, Breathability - 5000 gr/m²/24h. All seams fully taped for long lasting waterproofness

• Waterproof • Windproof • Breathable

6.

6. TAPED SEAMS

We add fully taped seams to our fully waterproof garments to keep you dry in the harshest of conditions. Taping all seams on a garment regardless of where they are situated ensures heavy duty waterproofing. Taping the garment also seals the small holes made when the waterproof fabric has been sewn to create the garment. A hot-melt tape is applied over all the seams; this creates a perfect airtight seal allowing added strength and longevity to the garment.

BOOT TECHNOLOGY

BOOT CONSTRUCTION

NEONSEAM

Panels are glued and blindstitched and finished with a 4mm razor thin coloured liquid silicon based urethane. The result being a strong yet flexible seam that is watertight and durable whilst reducing the abrasion to skin.

BLINDSTITCH

Panels are double glued and then butted together followed by stitching that does not penetrate all the way through the neoprene. Inside the wetsuit, heat welded tape goes over the seams in high stress areas, this further strengthens the seams.

G-TAPE

Inner waterproof X-Flex taping fuses seams together for additional reinforcement.

BOOT NEOPRENE

FX:LITE

15% lighter than X-Flex neoprene. Made with more air cells to increase warmth and decrease weight. It's hydrophobic properties absorbs less water, providing superior warmth and durability.

X-FLEX

150% stretch neoprene is used in our high performance wetsuits. The latest X-FLEX neoprene is 10% lighter, absorbs less water and has a softer, more comfortable feel.

BOOT LINING

BOLTDRIY-X

Gul's exclusive fastest drying neoprene yet. The ultra quick-dry core wicks water away from the skin creating a cushion of air between the body and suit, giving ultimate insulation and warmth. Now with even more stretch.

MAGMA

Magma Air-Insulation thermal inner lining is super soft, 20% lighter and has 30% less water absorption than Thermal X-Flex resulting in the warmest, lightest and fastest drying material available in the Gul line up.

THERMOSPAN

Engineered so that your core body temperature locks in the heat. By wicking away your body moisture the lightweight thermal insulation traps warm air all around you. Keeping your core body warm helping blood to pump around your body creating your own central heating system.

D-FLEX

50% stretch neoprene. Flexible, warm, durable neoprene allowing you to perform for longer.

RS-FLEX-MK 2

The latest evolution of RS Flex neoprene! Now with over 150% + stretch the Ripstop is 10% lighter, the tighter weaved textile provides less water absorption, better durability, and maximum stretch.

BOOT FEATURES

RECOIL

A 3D print band positioned over the top of the foot. This acts in a similar way to the retinaculum that helps keep your tendons in place, preventing rolling of the foot.

RAZORSOLE

Our razor cut non slip sole provides maximum grip and flexibility. The zig zag patterned grip creates multiple drainage channels that have been designed to quickly remove water and deliver ultimate wet and dry traction.

LEASH GUARD

Preventing annoying leash jams, when surfing.

H 10

Bare foot feel rubber sole is ultra sensitive soft and flexible, but still offers the same outstanding grip expected from a thicker sole

SURFBOARDS

CROSS SOFTBOARDS HAVE BEEN DESIGNED USING REVO 3D CAD SOFTWARE IN SUPERLIGHT EPS FOAM BLANKS, SHAPED BY PREPROGRAMMED CNC MACHINES. THIS MAKES A BOARD THAT IS VERY RESPONSIVE AND EASY TO MANOEUVRE, ESPECIALLY IN FLATTER SECTIONS OF THE WAVE. TO INCREASE PERFORMANCE, AND THE OVERALL STRENGTH OF THE CROSS SOFTBOARD CARBONE:GLASS RODS HAVE BEEN INSERTED THROUGH THE CENTRE OF THE BOARD, ACTING LIKE A STRINGER ON A TRADITIONAL HARDTOP. 6OZ E:GLASS IS WRAPPED TWICE ON TOP, AND ONCE ON THE BOTTOM ADDING STIFFNESS AND EXTRA DRIVE. A 5MM IXPE FOAM IS THE FINISHING DECK OF THE BOARD, WHICH IS PERFECT FOR KEEPING YOUR FEET FEELING GRIPPED IN POSITION. THE SOFTBOARD BOTTOM IS FINISHED WITH A 4MM HDPE SLICK, WHICH GLIDES ALONG THE WATER. HD FOAM INSERTS MAKE OUR CROSS SOFTBOARDS TOUGHER, GIVING YOUR FINN EXTRA BITE. EACH BOARD IS FEATURED WITH FUTURE FIN PLUGS.

COMBINING ALL ELEMENTS OF THE CROSS SOFTBOARD MAKES OUR BOARDS VERY SPECIAL AND SUPER FUN IN ALL CONDITIONS.

SUPPLIED WITH FUTURE SAFETY FINN.

Technical

WETSUIT FITTING GUIDE

SIZE CHART & FITTING

THE GUL FIT:

Gul continues to develop its fit and sizing. One of the most important factors when buying technical apparel is the fit. If the garment doesn't fit correctly, if it isn't comfortable, it won't perform to its' designed capability. When it comes to wetsuits if the suit fits too loose, there will be cold water entering and you'll never stay warm. A suit which is too small or large can also cause a rash. Gul's 50+ years of wetsuit design and engineering helps ensure an excellent fit.

HOW A WETSUIT WORKS:

A wetsuit creates a barrier against nature's extreme elements by utilising the insulating properties of closed cell neoprene. Neoprene is a closed cell foam made up from thousands of tiny air bubbles known as cells. The air within these tiny cells creates a barrier which slows down the conduction of heat and allows your body heat to be retained.

NEOPRENE:

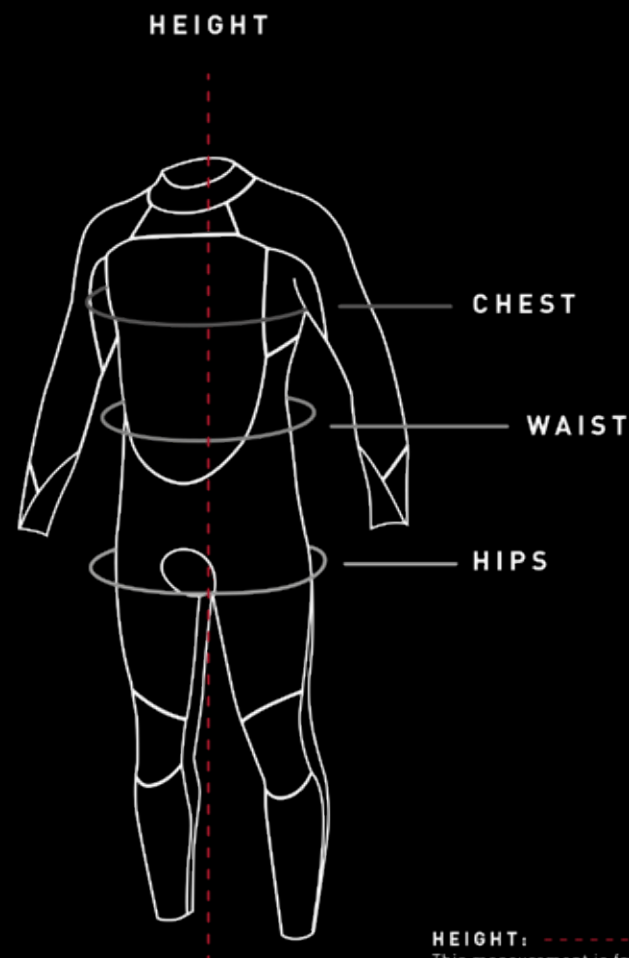

Gul's focus is to use the world's best neoprene and fabric innovations available. All materials used in the range are manufactured to Gul's specifications in order to have the right combination of warmth, strength, flexibility and durability. Gul has its own QC inspectors at the factory source who remove and reject any neoprene which comes below Gul's superior standards.

NEOPRENE THICKNESS:

The thickness of the neoprene utilised in a wetsuit determines the warmth and flexibility. A thick wetsuit provides maximum insulation but can inhibit the flexibility. A thin wetsuit will be very flexible but can affect the thermal insulation properties. The key is to get the right combination of warmth and flexibility so that you stay warm, but also provides maximum flexibility.

PLEASE NOTE:

All garment/suits not offered in all sizes.
The Size Charts are for general guidelines only.
If between sizes, always go up a size!

HEIGHT: _____
This measurement is from the bottom of your foot to the top of your head

CHEST: _____
Measure under the arms all the way round the body at the fullest part of your chest

WAIST: _____
Measure around your waistline

HIPS: _____
Measure around the widest part of the hips

GLOVE SIZE GUIDE

Gul gloves are sized according to width. To work out your size, we recommend you measure the dominant hand. for example your right hand if you are right handed, this will typically be larger. Using a tape measure, wrap the tape around your hand just below your knuckle this will be the widest part, make a fist, this should provide you with your size.
